

The MathMagician!

Taco Math

1. Decide the # of tacos you could eat in one meal (must be more than one, but less than ten).
2. Multiply your answer by 2.
3. Add 5.
4. Multiply by 50.
5. If you have already had your birthday in 2017, add 1,767. If you have not already had your birthday in 2017, add 1,766 (Note: for each year after 2017, add 1 to each of the above totals).
6. Now subtract the 4-digit year you were born.
7. You should now have a 3-digit number. The first number listed is the # of tacos you said you could eat in one meal, the second 2 digits listed are your age!

Mind Reader

1. Choose any number. Do not tell it to me, or anyone around you! Write it down.
2. Add 9.
3. Double your new answer.
4. Subtract 4.
5. Divide by 2.
6. Subtract your original number.
7. Your answer is 7!!!

Calculator Math

1. Using a calculator, punch in the first 3 digits of your phone #.
2. Multiply your answer times 80 (press =)
3. Add 1 (press =)
4. Multiply times 250 (press =)
5. Add the last 4 digits of your phone # (press =)
6. Again, add the last 4 digits of your phone # (press =)
7. Subtract 250 (press =)
8. Divide by 2 (press =)
9. Does your answer look familiar???

Five Master (used to teach multiplication)

To multiply any number times 5, cut the answer in half, then move the decimal one space to the right!
